SPECIALITY PRODUCTS:

[DuroCaulk](#)

DUROMAR DUROCAULK is an elastomeric epoxy urethane system, which is designed to be used with epoxy systems as a flexible repair and caulking compound. It is used primarily to fill expansion joints and cover joints. It can be over coated with other DUROMAR linings or maintenance products to enhance physical or chemical properties, if required.

[Duro-Stik](#)

DUROMAR DURO-STIK is an extremely fast curing putty material, packaged in a single tube for easy mixing and use. Ideal for storing in toolboxes to make quick repairs or to stop leaks in steel, aluminum, fiberglass or concrete.

[EAC-UW](#)

DUROMAR EAC-UW is an underwater version of the EAC used for resurfacing or painting underwater vessels, pilings or other similar items.

[SAR-UW](#)

DUROMAR SAR-UW is an underwater curing version of SAR used for rebuilding areas underwater or where the component needs to be put back into underwater service before full cure. Applicable to both fresh and saltwater service.
